

Privacy Policy

How Birthly processes personal data

Versão: v3.0 | Vigência: 01/11/2026

How Birthly processes personal data

This document describes the current Birthly product. The language follows the app preference. Birthly - app for organizing birthdays, reminders and shareable cards.

1. Summary and scope

This Policy explains how Birthly processes personal data in the app and account, birthdays, reminders, cards, notifications, subscriptions and deletion flows. It applies with the Terms of Use.

- It reflects current code and integrations; new features may require an update.
- Birthly does not sell personal data or use birthdays for behavioral advertising within the current scope.

2. Controller and channel

The controller is Eduardo Shoiti Fujiwara, a natural person operating under the FujiSys brand and responsible for processing decisions. The name, address, email and data-protection contact must be published and kept current in the app and official listing.

- Use Birthly support or the official listing contact for privacy requests.
- The channel should record requests, enable proportionate identification and follow-up.
- The controller can be contacted at Rua Conselheiro Brotero, 717, São Paulo - SP, CEP 01232-011, and contato@fujisys.com.br.

3. Data processed

We process data needed for specific purposes, depending on the features you use:

- Account: identifier, email, display name, sign-in provider and session data.
- Birthdays: name, day, month, supplied year, tag, notes, metadata.
- Contacts: with permission, names and birthday events for candidates; you choose and confirm what to save.
- Photos and signature: a profile photo may remain local; background photo and signature are used in the card flow and the signature may be included in the PNG.
- Device: platform, version, language, time zone, permissions, push token, deliveries and technical errors.
- Purchases and acceptance: product, store, entitlement status/expiry and document version/date.
- Preferences: language, theme, local lock, notifications and widget/offline data.

4. Sources and purposes

Data comes from you, the device, sign-in providers and technical services. We use it to:

- Create, authenticate and protect accounts, recover access and prevent fraud.
- Save, sync and display birthdays and preferences.
- Calculate and deliver enabled reminders subject to permissions.
- Import selected contacts after permission and confirmation.

- Compose and share cards without automatic publication by Birthly.
- Process purchases, restore subscriptions and show Premium.
- Provide support, respond to rights, comply with law and protect security.
- Measure stability and diagnose failures when active.

5. LGPD legal bases

Bases vary by activity: contract performance or pre-contractual steps; consent for permissions and choices that require it; legal obligation; exercise of rights; and legitimate interests where applicable after necessity and impact assessment.

- Refusing permission does not block independent features but may block the corresponding feature.
- Consent may be withdrawn at any time through a free and facilitated process, without affecting prior processing.
- We do not make solely automated decisions about credit, price, employment or personality profiles.

6. Sharing

We share only what is necessary for an informed purpose, an appropriate legal basis or legal obligation:

- Supabase: authentication, database and synchronization.
- Firebase Analytics/Crashlytics: metrics and diagnostics; documented events avoid email, token, receipt and full deep-link URL.
- Firebase Cloud Messaging and APNs: notification delivery using token, platform and time zone.
- RevenueCat and Apple/Google Play: purchases, restoration and product/entitlement status.
- Apple/Google: social sign-in and platform services when selected.
- Sharing app: receives the PNG only after your confirmation; its processing is independent.
- Authorities and providers: when needed for legal compliance, rights, fraud or operation.

7. International transfers

Some providers may process data outside Brazil. We assess necessity, purpose, security, contract and safeguards under the LGPD and ANPD rules. The provider may also apply its own policy.

- Supabase: privacy policy (<https://supabase.com/privacy>)
- Firebase: privacy information (<https://firebase.google.com/support/privacy>)
- RevenueCat: privacy policy (<https://www.revenuecat.com/privacy/>)
- Apple: privacy policy (<https://www.apple.com/legal/privacy/>)
- Google: privacy policy (<https://policies.google.com/privacy>)

8. Retention and deletion

We keep data as needed for stated purposes, service delivery and legal duties; periods vary by data type and risk.

- Account, birthday and preference data: while the account exists, unless retention is needed.
- Push tokens: while enabled; deactivated when disabled, signed out or deleted according to the flow.
- Background photos and temporary files: used only during creation/sharing and automatically discarded when leaving the flow or after sharing. Nothing remains stored in the app and there is no automatic upload.
- Legal acceptance, security, audit, transaction and incident records: as needed for proof, law and rights.
- Metrics and crashes: according to provider retention and minimization.

9. Security

We use measures proportionate to risk: authentication, per-user database policies, administrative separation, public client keys, server-only secrets, permission controls, minimized logs and temporary-file cleanup.

- No transmission or storage is completely secure; protect your device and credentials.
- For relevant incidents, we will take legally required measures and notices consistent with ANPD guidance.
- The Supabase service-role key and Firebase credentials must never be in the app.

10. Data-subject rights

Under the LGPD, you may request confirmation, access, correction, anonymization, blocking, deletion where applicable, portability subject to regulation, sharing information, consent withdrawal, objection where available and review of automated decisions affecting your interests.

- Send requests through the app/listing channel with enough information to locate the account.
- We may request proportionate identity verification.
- We respond within legal periods; limits may apply for retention, security, third-party rights or trade secrets.
- If unresolved, you may contact ANPD and consumer authorities; keep proof of the request.

11. Children, cookies and advertising

Birthly is not intentionally directed to children and does not knowingly request children data without applicable basis and safeguards. In the current mobile flow, browser cookies are not the main mechanism.

- Websites, stores and third parties may use their own technologies.
- We do not sell data, share lists for advertising or use birthdays for behavioral advertising within current scope.
- We do not use solely automated decisions with legal or similarly significant effects.

12. Changes and effective date

We may update this Policy for new features, providers, legal bases, security or regulations. Each version will have a number and effective date.

- Material changes will be highlighted and, when needed, require renewed acceptance.
- Non-material changes may be published in the app.
- Version and acceptance history may be kept for transparency and accountability.
- Version v3.0 is effective 01/11/2026. The controller is Eduardo Shoiti Fujiwara, a natural person operating under the FujiSys brand, reachable at contato@fujisys.com.br.
